I AM EMPOWERED

INTRAORAL CAMERAS
Integration for A-dec®
1) The photons provided by an external light source illuminate the tooth tissues (enamel and dentin).
2) The energy applied by the excitation source (Blue LED) to the tooth tissues cause an energy surge in the material’s elementary particles, which then become very unstable.
3) To be able to return to a situation of stability, the excess energy is released by emitting photons lower in energy than the excitation source.

SELECTIVE CHROMATIC AMPLIFICATION...
Due to the combination of blue light absorption by soft tissue and selective chromatic amplification, SoproCARE® improves visibility of all areas of tissue inflammation.

LESS INVASIVE
HIGHLIGHT PATHOLOGIES AND MOTIVATE THE PATIENT
The autofluorescence makes it possible to detect decay even at its earliest stages, without subjecting the patient to any unnecessary radiation. SoproCARE® also reveals dental plaque without using plaque disclosing solutions, and highlights gingival inflammation painlessly.

Improve clinical performance and easily communicate the treatment plan to your patient. The patient is involved in making decisions and accepts the treatment.
Images can be captured and stored into any imaging software giving you all of the necessary tools to practice minimally invasive dentistry.

Mini Dock U_USB2 is designed for use with all Sopro cameras. It does not require a power supply due to the power being sourced from the computer through the USB cable.
Live streaming video, via a USB 2.0 connection, is sent to an operatory PC's display. A further enhancement to this new model is the modular connection of all camera cabling to the dock... no more threading cables into dental unit flex arms.
The Mini Dock U_USB2 design is compact, lightweight and easily installed into A-dec's 500 or 300 chair and delivery system. Capturing images can be configured to optionally use the camera handpiece or the chair's foot control. The kit contains the docking station as well as all required cabling for successful integration.
DIAGNOSE AND TREAT CARIES

ENHANCE CLINICAL EXAMINATION CAPABILITIES

Take the guesswork out of caries detection
Autofluorescence improves your vision during clinical examination and expands your diagnostic capabilities. Highlight caries and provide the most appropriate treatment for your patients.

Early detection of lesion for less invasive treatment
Manage your clinical decisions depending on the individual’s caries risk and preserve tooth structure.

Protect your patient from any unnecessary radiation
The fluorescence concept surpasses the limitations of digital radiology in the detection of caries. Promote better patient care by reducing the number of necessary X-rays.

Save time
Speed up the decision-making process by improving your diagnostic capabilities and optimizing your clinical examination.

PERFORM LESS INVASIVE TREATMENT

Eliminate uncertainty
Easily distinguish between healthy and infected tissue to determine the limits of excavation, and consequently preserve the pulp. Fluorescence makes treatment easier, improving efficiency and productivity.

Improve the quality of your treatment
Preserve healthy teeth while removing all infected tissue.
REVEAL PLAQUE AND GINGIVAL INFLAMMATION

INSTANTANEOUSLY HIGHLIGHT

PLAQUE AND GINGIVAL INFLAMMATION

Perform a complete and rapid assessment of the patient's oral health, without adding plaque disclosing solution.

- Gingival inflammation: from hues of pink to deep magenta depending on the severity
- Plaque: grainy white
- Calculus: shades of yellow and orange

PREVENT HYGIENE PATHOLOGIES

Early identification of hygiene pathologies will result in early intervention and minimally invasive treatment.

Maintain the patient's health and the longevity of their natural dentition.

UNIQUE PROPHYLAXIS TREATMENT WITH FLUORESCENCE

Fluorescence brings better vision for a faster and more efficient treatment.

1. Diagnosis and Communication with patients
2. Guided treatment in real time
3. Treatment finishing by Polishing
4. Control and follow-up

CONTROL HYGIENE EVOLUTION

Encourage your patient by showing them their progress over time, for long term quality treatment.

ACTEON intraoral cameras exceed the limitations of the naked eye and offer high quality images with magnification of up to 115 times. With MACROVISION, the infinitely small is now visible.

**This is MACROVISION**

Enhance your vision during examination
See details otherwise not visible to the naked eye. Closely monitor micro fractures and the development of small lesions.

Improve your clinical performance
Take a more detailed look into dental cavity preparation and be more accurate during treatment.

**SoproCARE**
**SoproLIFE**
**Sopro 717 First**

Improve patient communication
Highlight pathologies in an image and easily explain clinical procedures. Facilitate dialogue to address objections and patient concerns.

Increase treatment acceptance
Patients become more involved, meaning they soon understand the importance of their planned treatment. Improve efficiency and productivity.

Educate your patient
Use real images to make the patient more attentive and confident about your advice.

Follow up
Provide effective and efficient treatment planning by saving the images directly into the patient chart. Easily compare images from past patient visits and monitor progress.
The power of autofluorescence

- **DIAGNOSTIC mode**: Identify the development of occlusal and proximal carious lesions.
- **TREATMENT mode**: Perform minimally invasive treatment by preserving healthy tissue.
- **DAYLIGHT mode**: From portrait to macrovision, obtain sharp images with the large depth of field.

SoproLIFE® offers two different types of vision: white light (daylight) and blue light (fluorescence).

3 needs, 3 modes

- **CARIO mode**: Caries are detected as red, surrounding tissue is displayed in black and white.
- **PERIO mode**: Highlight plaque, calculus, and gingival inflammation.
- **DAYLIGHT mode**: Communicate more effectively with your patient and see details that are not visible with the naked eye.

SoproCARE® is an unmatched communication tool in the dental practice!
MACROVISION REVEALS WHAT WAS ONCE INVISIBLE

Magnification of the image up to 115 times
- Large depth of field from extraoral to macrovision
- Exceptional image quality provided by a highly sophisticated optical system
- Extremely small camera head for easier access
- Successfully capture images with a simple glide over the SOPRO® touch or foot control

COMMUNICATE WITH YOUR PATIENTS:
USE AN IMAGE, THE KEY TO EDUCATION AND CASE ACCEPTANCE

Simplicity in the palm of your hand
- Rounded shape and thin distal part for maximum accessibility and unrivaled patient comfort
- 105° angle of view for better exploration of distal areas
- Fixed focus with large depth of field, providing high quality images
- Ease of use: point and shoot

The medical devices for dental care SoproCARE®, SoproLIFE®, SOPRO® 717, SOPRO® 617 First are of class IIa and manufactured by SOPRO®, notified body LNE/GMED. NEWTRON® and EXCAVUS® are of class IIa and manufactured by SATELEC®, notified body LNE/GMED. EXPASYL™ is of class I and manufactured by PIERRE ROLAND®, notified body LNE/GMED. These medical devices are not refunded by health insurance organizations. Read carefully the instructions on the labelling before use.

Dock U-USB2
- Power supply: 24V ± 50Hz - 60Hz
- Power consumption: 15VA
- One digital USB 2.0 output
- Dimensions (mm): L.50 x W. 75 x H. 36
- Weight: 76g
- Cable length: configurable

Windows® minimum configuration required
- Operating system .................. Windows 7 SP1
- Processor .............................. Core2duo - 3GHz
- RAM .................................................. 2GB
- Hard disk ........................................... 250GB
- USB ports ................................... 4 USB2 Hi-Speed ports
- Graphic card .............................. 512 MB RAM
- Screen resolution ................. 1280 x 1024

Windows® recommended configuration
- Operating system .................. Windows 10
- Processor .............................. Intel Core i5
- RAM .................................................. 4GB
- Hard disk ........................................... 1TB
- USB ports ................................... 4 USB2 Hi-Speed ports
- Graphic card .............................. Chipset Nvidia® or ATI® 2 GB unshared memory compatible
- Screen resolution ................. 1280 x 1024 or more

Mac® minimum configuration required
- Computer .............................. MacBook® Pro 13.3"* or iMac® 21.5"* (Extraoral, Intraoral, LIFE, Macro)
- Operating system .................. OS X Mavericks
- Processor .............................. Intel® Core 2
- RAM .................................................. 2GB

Mac® recommended configuration
- Computer .............................. MacBook® Pro 13.3" or iMac® 21.5"
- Operating system .................. Mac OS X El Capitan
- Processor .............................. Intel® Core i7
- RAM .................................................. 4GB
